Hi Team,

Greetings of the Day,

Please find the link below for the sandbox account on staging. Please share your public IP address to access this URL.

URL : <https://developerapi.petpooja.com/>

Please use the credentials below to log in.

Email: adoughcookie23@gmail.comPassword : **ap2jbxod**Mapping code : **bw8dz5o93u** (Map this code on your end and pass it with the restID object in the order relay.)

Please find the attached documents that provide comprehensive guidance on the entire process:
How to use the sandbox account.

How to place test orders and key points to keep in mind.

Once you complete the integration on your end please check the test cases below. Kindly share the fulfilled order IDs for the test scenarios below.

We will review them and share any remarks. After that, we will be ready to go live on production and will share the production details.

- 1) Items + Tax
- 2) Item with the Addons + Tax
- 3) Item with the Variation + Tax
- 4) Item with Discount + Tax
- 5) Item with Addon and Variation + Tax

Regards

Hi Shivam,

Thank you for sharing the sandbox credentials and documentation.

1. Our current public IP address is **101.0.62.76**.
2. After we complete all the required test cases and receive your approval, approximately how long does it take to receive the **production credentials/API keys**?

Looking forward to your response.

Thanks,
Satya

Hi Satya,

Thank you for sharing the IP address. It has now been whitelisted, so you should be able to access the URL.

Regarding the production credentials, the timeline is entirely dependent on how long it takes you to complete the testing scenarios. Once you have successfully completed the test cases and shared the fulfilled order IDs with us.

Best regards

Hi Shivam,

Our public IP has changed. Kindly whitelist the new IP:

IPv4: 101.0.62.66

Since our ISP provides a dynamic public IP, it may change occasionally. Could you please let us

know the recommended approach for such cases? Do you recommend using a static IP for production, or should we share the updated IP whenever it changes for whitelisting?

Thanks,
Satya

Hi Satya,

Please share your latest IP address so we can whitelist it.

Regarding your query about IP whitelisting: for the staging environment, we only require your network IP to access the dashboard. When we go live, we will need the server IP where your platform is hosted.

To maintain continuous access with a dynamic network IP during staging, you can either use a VPN with a static IP or share your updated IP address with us daily for whitelisting.

Regards

Hi Team,

Please whitelist the below public IP address for access:

IPv4: 101.0.62.111

Kindly let me know once it has been whitelisted.

If this IP changes while I'm working from home or the office, could you please share the best contact person or support channel for requesting a quick whitelist update? It will help minimize any downtime.

Hi Shivam,

Hope you're well. We're integrating against the sandbox for restaurant 5312 / client_id 5147 / restID bw8dz5o93u and are stuck on the menu. Wanted to check whether we've missed a configuration step.

What's working with our credentials:

update_order_status → {"success":"1","message":"Order status updated successfully."}
rider_status_update → {"success":"success"}
What isn't:

mapped_restaurant_menus with {"restID":"bw8dz5o93u"} → {"success":"0","message":"unable to fetch Object from s3 bucket"}
Menu Trigger → {"lable":"Dough Cookie API Menu trigger failed.","code":0,"request":[],"response":[]}
The menu displays fine in the dashboard, so it clearly exists. Since request and response both come back empty on the trigger, it looks like the menu may not have been generated/published for API access yet.

Our Menu Sharing Endpoint is configured and publicly reachable:
<https://adc-backend-copy-production.up.railway.app/api/petpooja/pushmenu>

Is there an additional step needed at our end to enable menu sync, or does something need to be published on yours? Happy to re-run anything you'd like.

Thanks,
Satya

Hi Satya,

The provided IP address has been whitelisted.

Regarding the menu retrieval, please note that the "menu fetch" method is deprecated. The only way to receive the menu now is through a "menu push," where we push the menu data directly to your endpoint.

I understand that the menu push test is currently not working on the sandbox. To assist with this, please find the attached demo menu payload. You can use it to train and verify your integration logic until we resolve the menu push issue.

Best regards
